No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1983 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

Kahle/Austin Foundation

Information for Authors

The *Journal of Magnetic Resonance* includes papers dealing with the theory, techniques, methods of spectral analysis and interpretation, spectral correlations and results of magnetic resonance spectroscopy and related fields. The Editor seeks the assistance of expert referees in the evaluation of manuscripts of articles, but he alone is responsible for the final decision concerning acceptance.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Magnetic Resonance* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Communications are preliminary accounts of work of special importance or contain discussion of controversial subjects. Communications must be especially carefully and concisely prepared; since they may not be refereed, it is the responsibility of the author to ensure that the manuscript as originally submitted is free of typographical or substantive errors.

Notes are complete accounts of work of limited scope. Descriptions of spectrometer modifications or of new computer programs may fall into this category. No abstract is required, and the short length often permits expeditious handling.

Fifty reprints of each paper are supplied without charge, and additional reprints may be ordered on a form which is sent to the authors along with galley proofs which the author receives. The Journal *assesses no page or publication charges*.

All manuscripts and books for review should be sent to the editor, Wallace S. Brey, Department of Chemistry, University of Florida, Gainesville, Florida 32611.

Arrangement of the Paper

If the paper is lengthy, it should be divided into sections, although it is preferred that the sections not be numbered. Tables are numbered consecutively with *Arabic* numerals and are to be mentioned in order in the text. Each table should be supplied with a title. Figures are also numbered consecutively with *Arabic* numerals and are mentioned in order in the text. Each regular article requires an abstract which should describe concisely the substantive content, the conclusions reached, and the contributions of the research described. Since the abstract may be used directly by Chemical Abstracts and other abstracting services, it must be self-contained, having no refer-

ences to formulas, equations, or bibliographic citations which appear in the body of the manuscript.

Literature references are cited in numerical order in the text by *in-line, parenthesized*, italic numerals. References to "unpublished" or "to be published" work from the author's laboratory should not be given. However, dissertations may be cited, or papers actually accepted may be referred to as "in press" if the name of the journal is included.

Authors are urged to give careful thought to the logical construction of the manuscript, so that explanatory or parenthetical footnotes need not be employed. Any footnotes which are indispensable are not intermixed with references, but are indicated in the text by consecutive, superscript numerals, and each footnote will then appear in the print at the bottom of the page on which it is cited. Equation numbers are given in *square* brackets to the right of the equation, and references in the text to equations should be in the form "Eq. [3]."

Form of Manuscript

Manuscripts should be submitted in triplicate. The *original typewritten copy* should be supplied; mimeo, electrostatic and similar process reproductions are not usually sufficiently clear. All of the typing must be *double-spaced*, including that of abstract, references, and footnotes, on one side of good quality paper approximately 22×28 cm (8.5×11 in.) in dimensions. The first line of each paragraph is indented.

Each page of the manuscript should be numbered. The first page contains the article title, the author's name, and affiliation. At the bottom of this page should appear any footnotes to the title (indicated by superscript *, †, ‡); the number of manuscript pages, figures, and tables should also be noted. The second page should contain the abstract of 50–200 words.

Please submit a signed photocopy of the copyright assignment form which appears following this "Information" to the editor along with your manuscript. (This form will not be binding if your manuscript is not accepted for publication in *Journal of Magnetic Resonance*.)

Symbols and Abbreviations. The American Chemical Society's Handbook for Authors, 1978 edition or the Style Manual of the American Institute of Physics should be followed for standard abbreviations, names and symbols for units. Mathematical equations or symbols must be typewritten whenever possible. Greek letters may be identified in pencil in the margin. The author of any manuscript in which there are mathematical symbols is urged to supply a list identifying the characters required for the assistance of the printer in selecting the proper type. The list will not appear in print. Symbols for vectors and tensors should be clearly marked.

References and Footnotes. References to the literature should be cited in order in the text by in-line, parenthesized numerals. The references themselves are to be typed double-spaced on a separate sheet in numerical order. Each reference contains the author's initials, last name, journal name, volume, initial page number and year in parentheses, *in that order*. The name of the journal is abbreviated in the style of Chemical Abstracts Service *Source Index* (1979 Edition). For book references, the

form is author's name, name of the book in quotation marks, editor's name (if any), edition if other than the first, chapter or page number, publisher's name, place of publication, and year of publication.

Any footnotes which are included are numbered in a sequence separate from the references and must be typed in the manuscript on a separate page.

Tables. Tables should be laid out carefully, so that minimum space is used and entries are accurately grouped and clearly labeled. Usually, a table should be arranged vertically, with more rows than columns. Vertical lines are not used to separate the columns. Each table is numbered with an Arabic numeral, provided with a title, and typed on a separate sheet of paper. Footnotes to the table are placed directly below it and are indicated by superscript, lower case, italic letters (^{a,b,c}). Tables that are longer than two manuscript pages will be reproduced photographically, and should therefore be typed in the exact form desired. All such tables should be carefully checked since errors cannot be corrected in proof.

Figures. Figures must be carefully drawn in black, waterproof drawing ink, to draftsman's standards, with lettering by stencil or drawing machine. Freehand, penciled, or typewritten lettering is not acceptable. Lettering should include numerical scales and units required for the two axes, and should be large enough to be legible after reduction by 50–60%. The illustration copy should be on sheets of the same size as that on which the manuscript is typed. Smaller figures may be mounted on sheets of the required size, and larger originals may be handled by supplying glossy, high-contrast, photographic reductions. The original and two duplicates of each figure are required.

Diagrams. Ink drawings should be supplied for any complex molecular formulas or diagrams involving material which the printer cannot readily set in type.

JOURNAL OF MAGNETIC RESONANCE

Manuscript Title _____

Authors _____

I hereby confirm the assignment of all copyrights in and to the manuscript named above in all forms and media to Academic Press effective if and when it is accepted for publication by Academic Press. (For U.S. government employee authors, this provision applies only to the extent to which copyright is transferable.) I also confirm that the manuscript contains no material the publication of which would violate any copyright or other personal or proprietary right of any person or entity, and I acknowledge that Academic Press is relying on this letter in publishing this manuscript.

Date

Signed

Name (and title if not author)

To be signed by at least one of the authors (who has obtained the assent of the others, if any). In the case of a "work made for hire" (a work prepared by an employee within the scope of his or her employment or commissioned as a work for hire under a written agreement), an authorized representative of the employer should sign.

Please note: Manuscripts cannot be processed for publication until the Publisher has received this signed form.

If the manuscript is not published by Academic Press, this letter will not take effect.
